

eDOSE CONNECT

A product of Pinestar Technology, Inc.

Easy Dose It!

eDose Connect™ for PET Radiopharmaceutical Ordering

Ordering doses from your IBA Molecular PET radiopharmacy is a daily process for most imaging centers. Ensuring your orders are complete, accurate and sent on-time is essential and time consuming. To ease this process, IBA Molecular, in conjunction with PineStar Technology, Inc., has developed a new web-based online dose ordering system for our customers.

With eDose Connect you can:

- Access orders from anywhere
- Track order history
- Increase efficiency
- Save time and effort

The implementation process is simple and complete. All of your valuable data will be saved in a HIPAA compliant environment, so that each time you login, it can be easily accessed. This includes details such as:

- Facility name and address
- Referring physician information
- Indication and procedure data

Should your facility have any special requirements for the IBA Molecular pharmacy staff, you can easily add this information to ensure your dose orders properly reflect these details. As an added feature, you can also submit and save future orders.

Streamlining your dose ordering process is quick and simple with eDose Connect.

Contact your IBA Representative for more information.

eDose Connect is now available in specific regions of the United States, but will soon be available to all IBA Molecular customers. The utilization of eDose Connect is conditional in some states and is dependent on the state's specific regulations which govern e-prescribing.

With your computer and a click of the mouse your imaging staff can:

ORDER...

all of your doses at the same time or as they are scheduled for an appointment.

CONFIRM...

your orders have been received, downloaded and processed by the IBA Molecular staff.

REVIEW...

all existing orders, as well as order history.

EDIT...

orders from anywhere, anyplace, should your schedule change.

TRACK...

ordering activity, making the daily operation of your PET or PET-CT imaging center more efficient.
