INTRODUCTION

Dear reader

'As every month, we are happy to provide you with the last edition of the Molecular Imaging Review. In two and half year, this review has become an anticipated and appreciated publication. We are pleased to be able to provide such support to you besides high quality products. This review inaugurates a change in the structure of the Literature Review. From now on, the MIR will merge the PET and SPECT categories within the functional categories. These functional categories have also been slightly reshuffled to place some focus on disciplines such as Cellular Death and Alzheimer's which are particularly dynamic. We hope that you enjoy and benefit from this new edition.

Our teams remain available to assist in any other aspect of your practice.'
